- Multi-room Audio Video Distribution
- Home Cinema
- Boardrooms and Conference rooms
- Control Systems
- Motorised Blinds and Curtains
- Presentation Facilities
- Media Servers
- Security Systems
- Structured Cabling Installation

In good hands?

Because we keep everything in-house this ensures we have the necessary disciplines and expertise to see a project through to completion.

We're **manufacturer accredited installers** of all equipment, cabling and network infrastructure:

Audio Visual, Control Systems, Telecoms, Electrical, and IT - making us your perfect partner.

Our accredited technicians consult, design, program, install and support the system of choice.

Our project managers include **PRINCE2** practitioners and oversee our engineers who are trained and equipped to work unhindered - so our costs are always competitive.

Specialism

Many companies can install a system but the real niche is ensuring an **advanced control system** is user friendly and performs as expected. Our own built control system is an ingenious approach that is simplistic to the end user but hides a powerful control program that scales according to the size of the project.

Our upbringing has taught us to only focus on **tried and tested** solutions. This is why we're accredited with 1st tier brands AMX, Creston, Lutron, Control4 and Kaleidescape.

Within Budget

Rest assured our knowledge and experience means we can devise a system solution that falls **within your budget**. Our project management methodologies ensure the budget is not breached too! After all, we provide high quality systems that are tailored to the individuals' requirements.
